About Us

We are a company based on the tradition of being a family run business. We have several decades of experience and practice in metal machining. Our main activity concentrates on the production of a wide variety of turned parts with the application of CNC technology. We are proud of our long history, which dates back to the post-war times. Nowadays the company is run by the fourth generation of the founder's family and considering the continuous development in modern technologies we won't be the last.

All machines are
equipped with a
barfeeder

A close-up photograph of a CNC lathe tool cutting a metal part. The tool is a multi-fluted turning tool, and the workpiece is a cylindrical metal bar. The background is dark and out of focus, showing some colorful bokeh lights. The image is partially overlaid by a blue semi-transparent shape on the right side.

Offer

We manufacture products on customer order only according to the documents created by TADEx or entrusted to us. We produce elements from round, square and hexagonal bars.

Processed materials:

- Steel
- Stainless steel
- Aluminum
- Brass
- Brown
- Plastic

Machining space of machined turning elements:

- Minimum diameter 3mm
- Maximum diameter 110mm
- Maximum length 300mm

Machining space of the machined milling elements:

- 750/400/450mm

Quality policy

We do not hesitate to encourage our employees to use their own initiative and pay particular attention to such features as conscientiousness, diligence, responsibility, trustworthiness and a friendly and professional attitude towards customers.

We have spared no expense in improving our quality system. We would like to assure customers that parts they get are of the highest level of quality. A certificate showing that the quality management system in our company provides services in accordance with the **PN-EN ISO 9001:2015** standards, is in compliance with our effort.

In order to ensure the best quality of products not only do we have a highly skilled staff but also a well equipped **measurement laboratory**

Measurement laboratory

OGP MVP 200 Smart Scope multisensory measuring machine
MVP Sprint 300 MV multisensory measuring machine
Keyence IM-6225 measuring machine
TRIMOS height gauge
MITUTOYO surface tester

Cooperation

Long-term traditions and lots of experience on the machining market allow us to cooperate with partners, who give us an opportunity to perform additional treatment on productive details.

These parts can be **galvanized**,
heat treat and **ground**.

Tumble finishing

It often happens that parts that we produce must have suitable roughness and additionally must be free of any sharp edges. To solve this problem we bought a centrifugal disc finishing machine that allows us to do additional treatment on the surface.
