## **TECNOSTAMP SRL**

- **Founded in 1963**
- **Company area 3500m2 (sqmt) on two levels**
- **Employees: 17**
- **Quality Certification: ISO 9001:2015**
- **Turnover 2024: 2,6 M€**

# LOCATION

Street  
Sant'Eusebio 17,  
FELETTO(TO)  
ITALY

## **MARKETS SERVED:**

**Automotive**

**Agricultural**

**Household**

**Construction**

**Sport**

**Industry**

TECNOSTAMP manufactures components in thermoplastic materials for multiple market sectors with a wide range of applications. Our final products are part of the functioning of everyday life, while driving a car, getting on a motorcycle or playing foosball.

## **PRODUCTION**

Currently our company has 14 injection moulding machines from 50t to 550t, assisted by manipulators, 8 cartesian robots and specific assemblies for the production of high precision plastic components.

**From small series, to large productions, TECNOSTAMP makes its versatility a winning weapon.**

# QUALITY

The quality control integrated in the management system allows the identification of any anomalies in all the production lines. Every single production is subjected to controls through Process Control Cards that are shared with the customer, in order to identify and draw up a targeted Control Plan.

We guarantee traceability in all production phases, from acceptance to delivery of the final product, through the identification of the batches of raw materials, masters and any inserts that come into production.

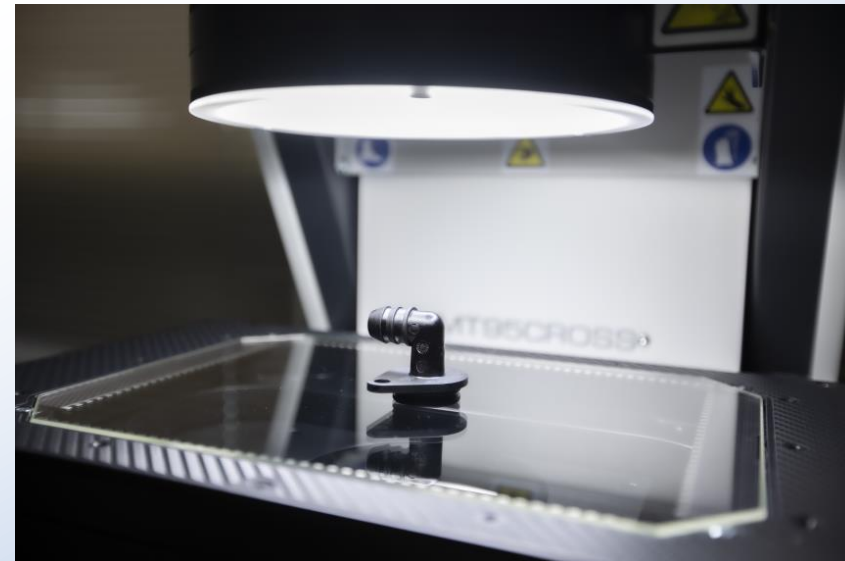

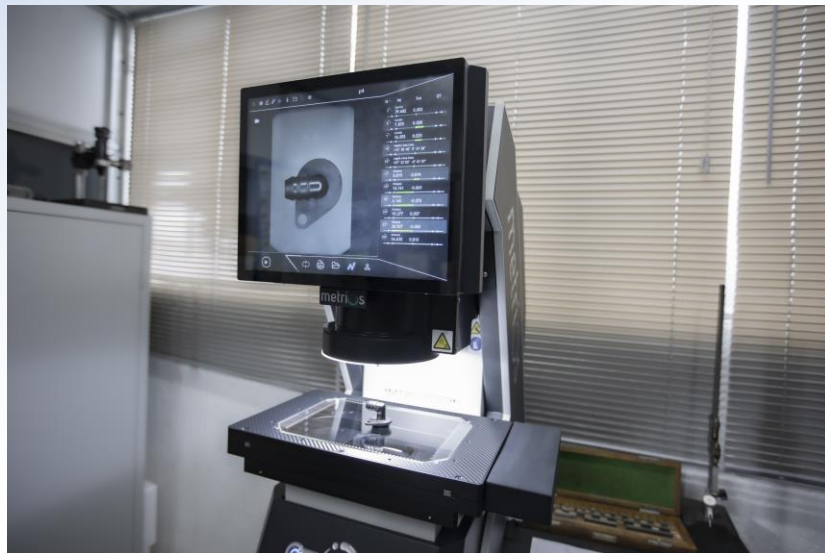

The monitoring of the injection moulding process is continuous, in order to guarantee our customers timely deliveries with the highest degree of quality. To this end, in 2020 TECNOSTAMP SRL has obtained the quality certification **ISO 9001:2015**

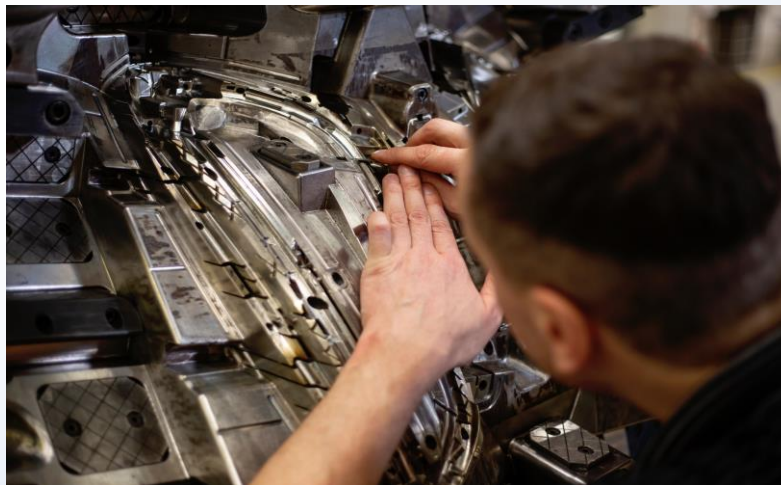

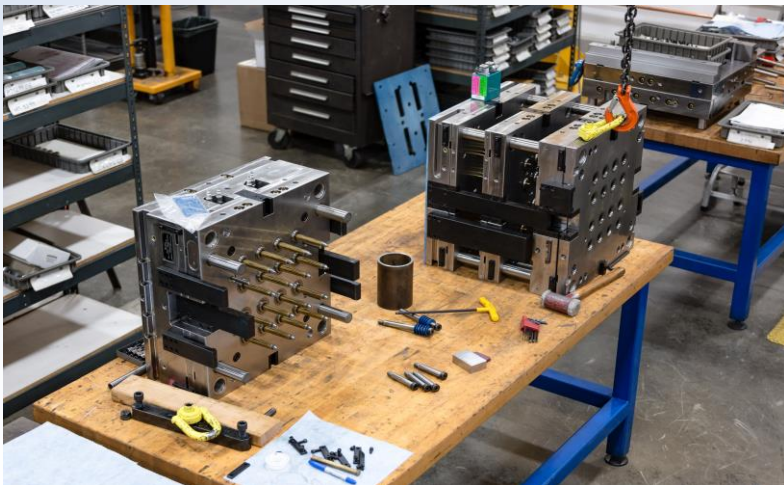

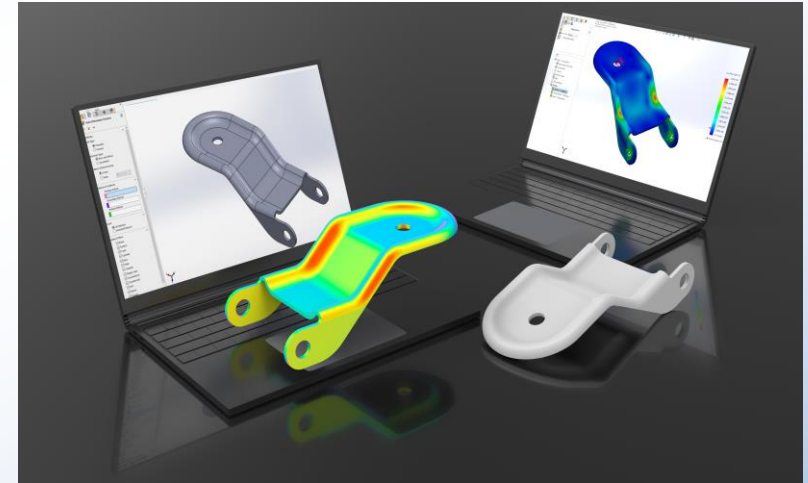

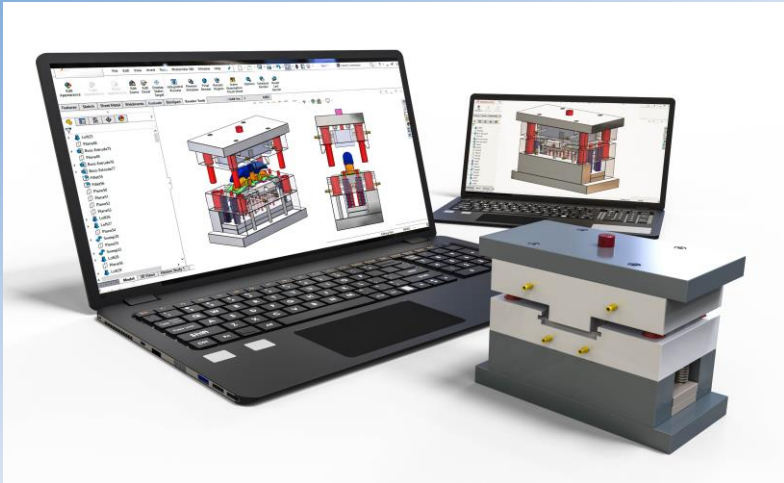

# QUALITY OFFICE

Tecnostamp owns an optical measuring machine for the control of the most complex pieces even with extremely narrow tolerances, offering objective and repeatable results.

This technology also allows to continuously analyze the Process Capability (Cp, Cpk)

# DESIGN AND MOLD CONSTRUCTION

# **WHY IS TECNOSTAMP THE BEST PARTNER?**

- TECNOSTAMP is able to design, produce and assemble all its products and related components. Furthermore, for the management of the molds, being mostly owned by the customers, we carry out small maintenance operations to maintain their efficiency.
- The Plus of the company is the speed and flexibility in the answers to both commercial and technical questions; in the delivery of orders; in adapting and modifying production when they undergo sudden variations with a tailor-made approach according to the Customer's supply and logistics needs, guaranteeing maximum production reactivity.

We operate daily with an entrepreneurial vision that follows the model of "lean production", simplifying the production through the flexibility and involvement of all company functions in the design and production phases.
