RELIABILITY AND PROFESSIONALISM
AT YOUR SERVICE

HIGH-PRECISION MACHINING

FERRERO Meccanica di Precisione has been manufacturing precision machined components for many years, punctually delivering made-to-measure parts and components to customer's specifications and developing design when needed.

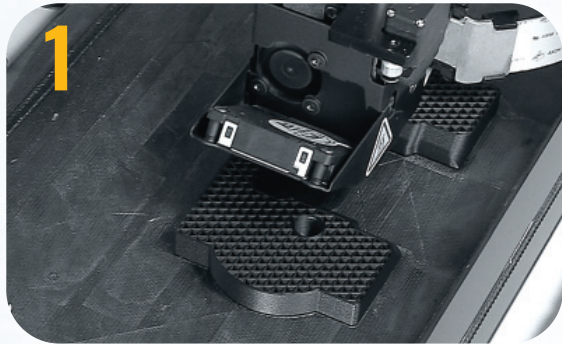

Every job is approached with experience, precision mechanics and state-of-the-art equipment to maintain our renowned high standards, from the production of customised parts in small series to the construction of machinery and complete fixtures.

Machining operations such as milling, turning and additional services can be integrated into any company's production process.

QUOTES

ADDITIVE MANUFACTURING

The 3D printing technology and its versatility have a strong application in the mechanical sector resulting in cost and time reductions for small series production and rapid prototyping in any industry.

CNC MILLING

FERRERO Meccanica di Precisione uses 3- and 5-axis CNC machining centres and is mainly involved in mechanical metalworking by means of chip removal systems such as milling machines.

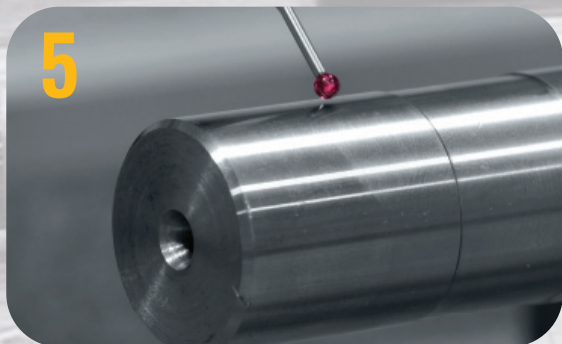

CNC TURNING

Precision mechanical turning is one of the most popular type of machining. Thanks to highly qualified and constantly trained staff, the company is able to produce any component out of any type of material, even the most complex, either with settings entered by the operator on the machine or using CAD-CAM software.

CAD-CAM DESIGN

To offer a complete service for the benefit of productivity, CAD-CAM design complements the focus on the final product with the maximum effect on speed, low cost, accuracy and residual error.

METROLOGICAL CONTROL AND TESTING

Metrological control and testing represent the key step to guarantee a high-quality product in line with customer expectations. FERRERO mechanical workshop relies on its own in-house metrology room where rigorous inspections of the final product are constantly performed, such as 3D scanning.

CONTRACT ASSEMBLY

We offer our customers accurate bespoke assembly and fabrication of complex machinery, working cells and high-tech equipment, both in our own premises and at customer's plant when required. We apply lean engineering processes to reduce customers' lead times and internal costs.

ASSISTANCE AND PROFESSIONAL SERVICES

Our experienced staff is always available at the customer's premises to offer specialised professional assistance, assembly and maintenance on any machinery. An added value on which highly qualified human resources are concentrated.

RETROFITTING

The rapid evolution of technology and the need to keep machinery efficient and productive have led FERRERO Meccanica di Precisione to offer a retrofit service to customers. Expert technicians can restore old machines to add up-to-date technology and new functions, thus extending their useful lifetime.
