

ABOUT OUR BRAND

The BTI Services brand was created in response to increasing market demand for comprehensive metalworking services. Currently on the market you can find companies offering laser cutting, press brake bending, TIG/MIG welding, electroplating or powder coating. It is much harder to find one that provides these services simultaneously. BTI Services solves this problem. Our technologically advanced machinery and experienced team provide support in your project from start to finish, ensuring that you find the best solutions to obtain a competitive product in the market.

Do you have an idea? We will design and realise any project, even the most daring!

Implementing a new product? Realise it in its entirety from start to finish!

WE ACT IN
