

WATERJET CUTTING

„WE THINK ONE CUT AHEAD”

We are a family company based in Wałbrzych Poland (Lower Silesia) that was founded in 1999. Since 2010 we have developed as an experienced service provider in the application of waterjet cutting for companies from a wide variety of industries – e.g. Automotive, plastic and glass processing.

We have **3 waterjet systems** from the American company FLOW. All systems are equipped with **bevel cut compensation**. Further advantages are **pumps 6500 bar and 4137 bar** as well as a patented **anchoring aid** that ensures reliable penetration of easily breakable and laminated materials such as marble, stone, glass and composites.

We stand up to various requirements. We would also be happy to find the perfect solution for your special application.

Would you like us to process your material? No problem. We calculate the material requirements for you based on your data and, if you wish, organize the transport of the manufactured parts back to your company. In straight line we are 250 km away from Dresden (A4) and 150km from Görlitz (A4). We are also close to the A4 highway and the expressway (S3).

Are you interested/need to cut our parts? Your order will be done promptly and on time:
