

NO PROJECT IS TOO BIG NO PROJECT IS TOO SMALL!

About us

ALS-Steel d.o.o. is a company founded in 2022. as a company dedicated to performing engineering services, manufacturing metal structures and machining. Company offers complete solutions from the idea to the realization of the finished metal product.

In a very short time since the establishment of the company, our quality of work and approach to work has been recognized by several domestic and foreign clients from Germany and Sweden.

Our mission is largely based on continuous efforts to increase the satisfaction of our clients. We are a reliable partner to numerous clients thanks to quality work and efforts to make our cooperation as effective as possible. Constant technological progress, education in the profession, all with the aim of providing the highest quality services and products. In this way, we retain existing and attract new clients.

ALS-Steel

ENGINEERING

Our engineering team is made of 2 mechanical engineers and one civil engineer. ALS-Steel works with 2D and 3D. We can deliver technical drawings, 3D models normatives and calculations.

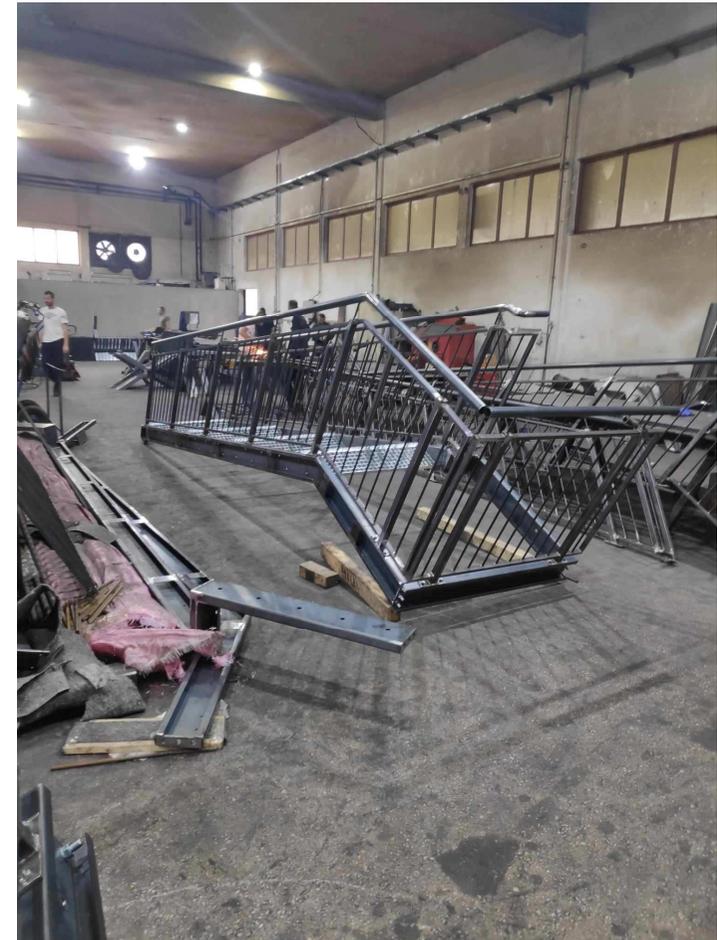

Our presentation

METAL PRODUCTION

ALS-Steel doesn't have metal production facilities but together with our partners we can offer production for different types of jobs. Depends on the size of the job we find the right partner that can deliver high quality products with a reasonable price. We work with stainless steel and carbon steel products. Together with projects we deliver complete technical documentation.

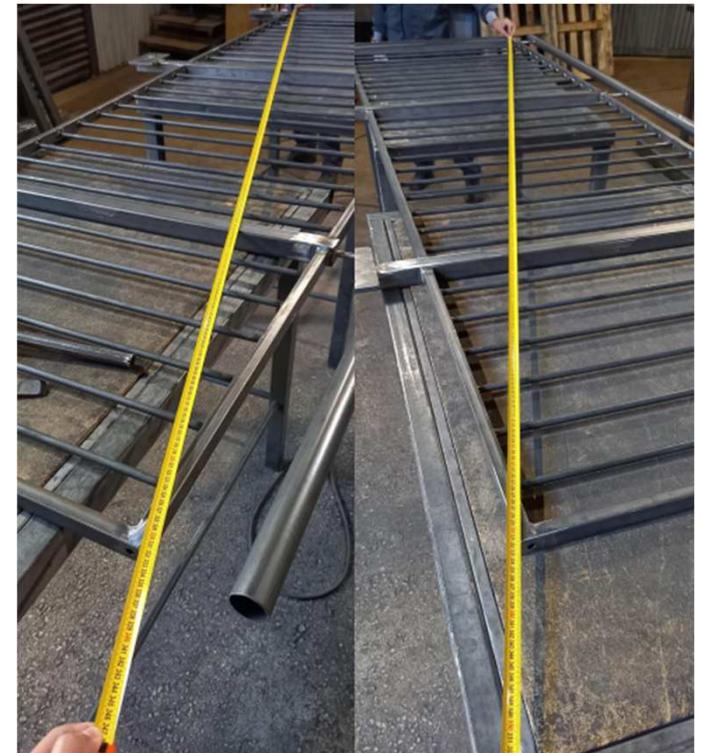

Our presentation

PRODUCT CONTROL

Every control is very important part of production. With right control on whole project mistakes can be avoided. Our team takes responsibility on dimensional and visual control on projects for customers. Our external welding engineers are responsible for welding part. Right documentation needs to be delivered to customer together with projects.

Our presentation

MACHINING AND TURNING

Our main business is machining and turning. During the last couple months we invested in new production line with new machines. Our mission is to deliver high quality products with all customer demands.

With prototypes, individual parts, small and big series, you have come to right place. Complex forms are our strength.

We produce parts from all common, machinable materials such as: aluminium, steel, brass, bronze and plastic.

ERP SYSTEM

Complete company is operated in one ERP system.

We are proud to set company foundation on system like this which meets all our needs. As we grow from day to day this system follow us on our journey.

Faster and simpler processes

Material, employee and operation tracking from raw materials to finished products.

More precise planning

Use information about required capacities and available resources to optimize planning and execution.

More precise deadlines

Stay informed about the order's status and degree of completion. Complete orders on time.

Reliable business decisions

Track processes, deadlines, and employee effectiveness in one system. Make decisions based on reliable data.

Efficient department operation

Take advantage of the program's strengths to optimize the scheduling of your plan of operations.

With transparent manufacturing unit management

you can start introducing electronic documentation. Connect your head office and manufacturing cells!
