

ELASTOMER MOULDING

OUR COMPANY

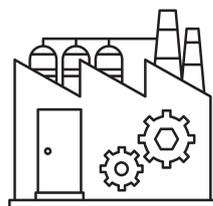

CAMISANA srl was founded in 1978 and since then we have been dedicated to the processing and moulding of customised technical items in rubber and silicone as well as co-moulded technical items. More than 40 years of activity have allowed us to develop an in-depth knowledge of elastomers and their moulding dynamics, enabling us to offer our customers expert and concrete support in the realisation of different projects.

Today this means continuous technical evolution and state-of-the-art machinery, process controls, qualified staff, and certified production.

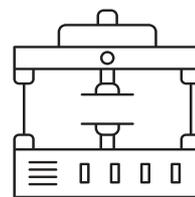

We have an ISO8 Class Clean Room in which we mould components for Medical Devices.

+ 40
years of
experience

+ 2000
square metres of
operational space

14 PRESSES
11 compression
and 3 injection

HOW WE WORK

REQUEST CUSTOMISED ITEMS

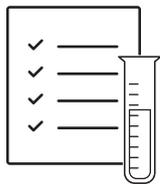

- Provide us with a technical drawing or sample to be manufactured
- Indicate the specifications of the compound or application so that we can identify the most suitable material
- Comparison for feasibility analysis
- Mould realisation
- Prototype production
- Start of production

COMPOUNDS

We're not satisfied with simply purchasing polymers, fillers, additives, and curing agents from the most qualified manufacturers: we want to mix them ourselves.

We are equipped with a mixing room where we produce all our clear filler compounds. Black filler compounds are mixed from masters containing embedded black carbon. This guarantees the accuracy, the cleanliness, the repeatability, and the uniqueness of our compounds.

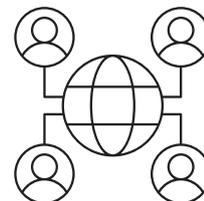

PROJECTS

more than 3000
projects completed

QUALITY

ISO9001:2015 certification
MOCA prod. Reg. CE1935/2004
ISO13485:2016 certification

EXPORT

we export products
worldwide

Thanks to an accurate design methodology, a controlled production process, and the use of the best elastomeric material available on the market, we have produced thousands of specific components such as: vibration dampers, caps, manifolds, couplings, flat and shaped gaskets, membranes, sleeves, o-rings, grommets, feet, balls, bellows, stators, pads, plugs, suction cups, etc.
