

Forstek d.o.o

more than 50 years of innovation

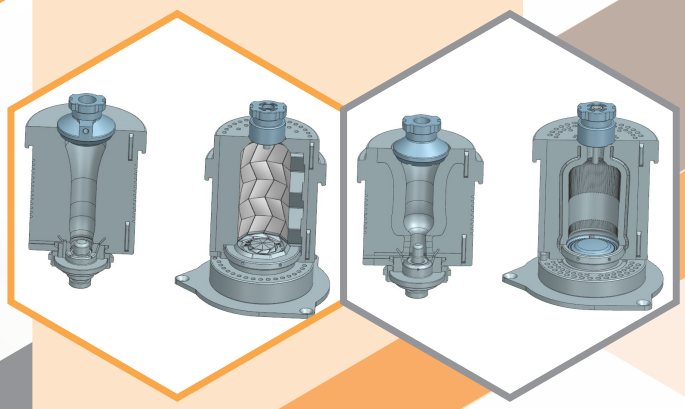

Moulds for glass industry
Solutions for pharmaceuticals
Advanced CNC machining
High production quality
Complete product development
Environmental responsibility

IN-HOUSE **DESIGN** FOR THE **GLASS** INDUSTRY

Our own design and development turns a bottle drawing into a complete 3D mould model – for IS moulds, press moulds and unique bottle shapes.

FROM **IDEA** TO THE PERFECT **PRODUCT**!

Moulds for glass industry | Solutions for pharmaceuticals | CNC Machining | Research and development | Quality control | Environmental responsibility

OUR EXPERTISE

Moulds for glass industry

Production of IS moulds (SG, DG and TG), Press moulds, moulds for Press-Blow machines and accessories. We also offer mould design. Our speciality is designing moulds for unique bottles.

Solutions for pharmaceuticals

We are a partner to numerous companies in the pharmaceutical industry, supplying format parts and spare components for packaging and filling lines. Our advantage lies in flexibility – we deliver custom-made solutions that comply with the highest pharmaceutical quality standards.

CNC machining

We operate state-of-the-art CNC technology for 3- and 5-axis machining of metals and other materials. By combining CNC milling, turning, and grinding, we ensure top-level precision and repeatability.

Research and development

Forstek offers comprehensive services from idea to product. Using CAD/CAM software (Siemens NX, Mastercam), we design 3D models and solve engineering challenges.

Quality control

All products are verified using the latest measuring technologies. We are equipped with a CMM machine, measuring arm, and microscope for high-precision inspections. In addition, we perform hardness tests, roughness checks, and other quality controls.

Environmental responsibility

Through paperless production, we reduce paper consumption, increase process transparency, and minimize errors. Our company also operates its own solar power plant, actively contributing to sustainable development and a lower carbon footprint.
