

PROMEK *S.R.L.*

PRODUZIONI MECCANICHE

We have been operating for 20 years in the precision mechanical engineering sector in Pescantina (VR).

Our company specializes in the management of small and medium production batches, both for milling and turning, with the possibility of carrying out machining also on materials supplied from laser cutting or oxy-fuel cutting, as well as managing assembled components.

This is made possible by the great flexibility and high quality that have always distinguished us, supported by a well-established network of suppliers who assist us with surface and heat treatments.

We work with stainless steel, aluminum, ferrous steels, all types of plastic materials, bronze, and brass.

Promek is also able to handle urgent requests from its customers; the market requires great flexibility, a characteristic that has always set us apart and has earned us the trust of our clients, with whom we maintain long-standing working relationships.

We are always available for our customers: you will receive a precise response when you contact us, and our team will assist you with any need or request.

Our services also include plate machining, customization of finished or commercial products such as pulleys and sprockets, machining of aluminum castings, and 3D milling for the production of complex-shaped parts and irregular surfaces that would be impossible with traditional methods.

We also offer a delivery service with our company vehicle to guarantee a high level of service to our customers.
