

„POLAN 2008“ LTD

COMPANY PRESENTATION

About us:

- History

Polan 2008 Ltd. is a family-run structure that was started in 2008 as a successor to Polan. Since 2008, the company has been working to achieve high professional results, build up its material base and select a good team.

- Intent

The main intent is to create a high authority in the eyes of our partners, for whom our work speaks for itself. Partnering with large companies in Bulgaria and Europe.

- Mission

By using and implementing new techniques and systems for quality management and creating safe working conditions, we can offer our clients high quality work, giving them security.

MAIN ACTIVITY

- Introduction

The company develops its activities in two directions – metalworking and production of plastic products. The production base is located in the city of Gabrovo, the Sharani village polygon. With over 700m² of built-up area, the company organizes production processes and development activities in a very good environment.

- Metalworking

Precision metal machining accounts for 90% of the company's total production. It has a well-equipped machine park for the processing of rotary and prismatic parts.

- Production of plastic products

As an additional activity, the company also works in the field of "Injection Molding", has three fully equipped injection molding machines and a recycling system.

PRODUCTION CAPABILITIES

■ Metalworking

For production needs, the company has a highly equipped machine park of fourteen programmable and one universal machines. Also, two high-performance band sawing machines, necessary for cutting and preparing bar materials for processing.

For machining rotary parts, the equipment allows for machining parts with diameters from Ø2mm to Ø250mm. Turning operations are performed using nine CNC machines, two of which are capable of milling and one universal machine.

For the processing of prismatic parts, the machine park consists of five CNC machines, three of which are 3-axis, one 4-axis and one 5-axis. They enable the processing of parts with a maximum length of 500mm.

Specific geometric machining is performed using wire erosion.

■ Production of plastic products

The company has a separate production room with three automatic injection molding machines with a maximum filling weight of 150g.

CONCLUSION

■ Summary

Based on all the factors listed so far, we believe that "Polan 2008" Ltd. is the company that will provide an adequate solution to all issues related to precision machining and the production of plastic products, will provide 100% loyalty and guarantee the quality of workmanship. "Polan 2008" Ltd. is the partner with whom you can work in a profitable cooperation for you.
