WHO WE ARE: We've been in the business of made-to-order chains for over 50 years.

We've been manufacturing special chains since 1969. Quality and reliability are at the core of who we are. Our deep knowledge and years of experience mean customers can count on us to deliver optimal, best-value solutions with every order. We've got the experience it takes to pull it off without a hitch—Roeder: rock solid at every link in the chain.

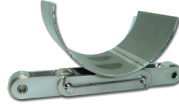

The name Kettentechnik Roeder stands for products that transform ideas into reality. Strong manufacturing engineering skills make it manageable. But it's not enough to guarantee the kind of quality and reliability our customers have come to expect—that takes years of experience, expertise, a sense of ownership and motivated workers. Our suppliers, including all leading German and international chain manufacturers, are the bedrock our quality is built on. Our open approach to dealing with customers and suppliers helps us build strong and lasting links.

If you can dream it, we can build it. Every last link.

WHAT WE DO: Every chain is a high-precision product.

Our products' applications:

- > Food & beverage (e.g. confectionery packaging)

- > Wood industry (e.g. timber transport with serrated link chain)

- > Packaging machines (e.g. rocker arm chains)

- > Automobile manufacturing (e.g. transport chains)

- > Bulk materials (e.g. scraper chains)

- > Hoists (e.g. leaf chains)

- > Feeds (e.g. prism attachment chains)

- > Handling (e.g. gripper chains)

WHO TO CALL: We're here to help—at every link in the chain.

Dipl.-Ing. Marcus Roeder
