ACS 3D

Vision

Become a point of reference for 3D printing in Italy, with particular attention to the biomedical and industrial sectors.

Mission

To provide high-quality, fast, customer-focused, and innovation-focused additive manufacturing services.

Vision & Mission

ACS 3D Srl is a service specialized in 3D printing using various technologies, dedicated to providing fast, precise, and customized solutions for businesses and professionals. We also offer 3D scanning, modeling, and technical consulting services for additive manufacturing.

Design and modeling

We develop technical and functional digital models from specifications, drawings, or physical samples. We offer support in the design of industrial components, optimizing geometries and materials for additive manufacturing.

3D Scan

We perform high-precision 3D surveys for component digitization, reverse engineering, and dimensional inspection. The resulting models are ready for analysis, modification, or reproduction.

3D Service

We produce prototypes and finished components using various additive printing technologies, ensuring precision, quality, and rapid delivery. We handle both single pieces and small runs for businesses and professionals.

3D printing technologies

ACS 3D Srl offers a wide range of prototyping and production solutions, combining in-house technologies such as FDM/SLA with the expertise of specialized partners.

This allows us to create customized projects, from single prototypes to small series, always choosing the most suitable technology and materials.

We use standard and engineered plastics and resins to ensure the right balance of quality, functionality, and affordability.

our customers & Partners

We collaborate with companies belonging to different sectors, offering customized solutions based on the specific needs of each market.

Where are we?

- **Fashion and design** – accessories, flexible components, aesthetic models.
- **Electronics and automation** – boxes, supports and functional prototypes.
- **Industrial mechanics and spare parts** – custom-made technical parts and components.
- **Architecture and furniture** – presentation models and product concepts.
- **R&D** – experimental prototypes and validation of innovative projects.
