PRODUCTION OF
SINGLE-PURPOSE MACHINES

TOOLING OF
MACHINING CENTERS

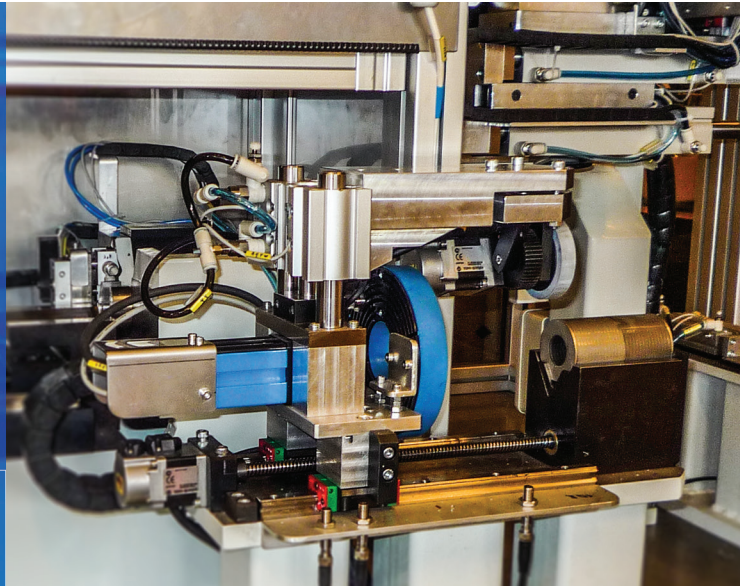

MANUFACTURING OF
UNIQUE / SPECIAL PARTS

PRODUCTION OF SINGLE-PURPOSE MACHINES

To solve specific problems that arise during the processing we design special machines that ensure the continuous automatic production of large series parts in order to provide higher quality and more cost-effective operation for our partners. Based on the customer's demands we undertake the complete execution of individual systems from the planning stage to the final assembly and insertion into a given technology.

ASSEMBLY TYPES:

- part assembly machines
- pressing machines
- screwing machines
- individual measuring machines

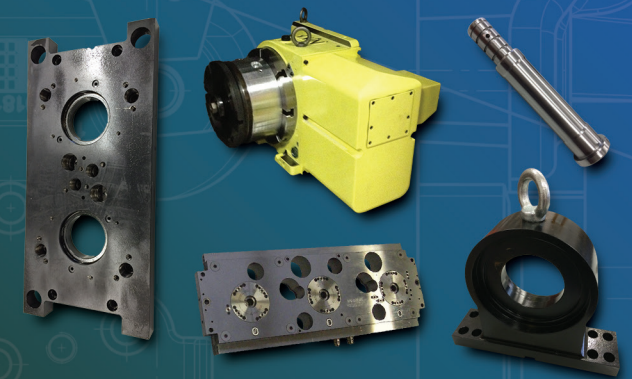

MACHINING TYPES:

- turning machines
- milling machines
- drill
- screw tap
- trimming machines
- welding

TOOLING OF MACHINING CENTERS:

We also specialize in the transformation of machining centers, which includes the following tasks:

- construction of hydraulic systems
- the complete construction of fourth and fifth axis of three-axis machines and its installation
- preparation of specific tooling for a given machining
- programming of machining centers

PRODUCTION OF INDIVIDUAL PARTS:

Preparation of high-precision parts and measurement reports of the given drawing documentations or models.

- machined diameter: 5 mm - 400 mm
- workable length: 0.5 mm - 1500 mm

The company has MSZ EN ISO 9001:2009 standards and is in the process of introducing MSZ EN ISO 14001:2005 environment conscious system.
