Extra production capacity when you need it

We support customers who need additional production capacity or one supplier to coordinate several operations within a single scope of supply.

Production at full capacity

We take on an agreed welding scope when your own workstations are fully booked.

External welding capacity

MAG 135 and TIG 141 to supplement your own production.

Prototype or first batch

Built to your drawings before you commit to series production.

Short runs

Orders that are not worth scheduling on your own line.

Repeat orders

An approved drawing revision and an agreed schedule for follow-on batches.

Several operations, one supplier

Welding and additional operations coordinated with partners, subject to confirmation of their capabilities.

TWO WAYS TO WORK WITH US

01

Welding customer-supplied parts

You supply prepared parts; HSP2 carries out the agreed scope of welding and inspection.

02

Complete supply

Once the scope is agreed, HSP2 can source the material and coordinate the required operations with partners.

Laser cutting, bending, machining, galvanising and powder coating, subject to confirmation of partner capabilities.

A simple process.
A clearly defined scope.

Drawing / model → review → clearly defined scope → quotation

01
Documentation
Drawing or 3D model, quantity and required date.

02
Review
Revision, material, tolerances, welds and finish. Questions are clarified before quoting.

03
Quotation
Scope, price, lead time, terms and exclusions.

04
Production
Work to the approved revision, inspection to the agreed scope.

> Requirements for welds, inspection, measurements, material certificates and acceptance documentation are agreed before quotation.
